## Providing Secure Homes brought to you from The Safety Letterbox Company

- The Safety Letterbox Company Ltd, The UK's leading mailbox manufacturer

As part of the [Secured by Design](#) initiatives, a complete solution has been created whereby a building and its occupiers are secure in the knowledge that no-one gains access to a building, not even a postal worker. [A secure door](#) is fitted with side screens as appropriate, housed within which are a through-the-wall bank of mailboxes, which in turn are housing the door entry system including push buttons, speaker units, transformers etc. All products can be polyester powder coated to a choice of RAL colours to suit.

A full variety of optional extras are available for each feature including automatic operators for disabled access.

This complete solution ensures the mail is safely delivered and stored for individual occupiers and the front door remains closed at all times, with access by the residents only.

This completely removes the risk of damage to the property, access by strangers and the need to have letterflaps in individual doors.

Unit 1B Milland Industrial Estate, Milland Road, Neath SA11 1NJ United Kingdom

FlapLock prevents access through the doors letterflap

Type FL05

Flaplock Type FL01 Lockable Letterflap

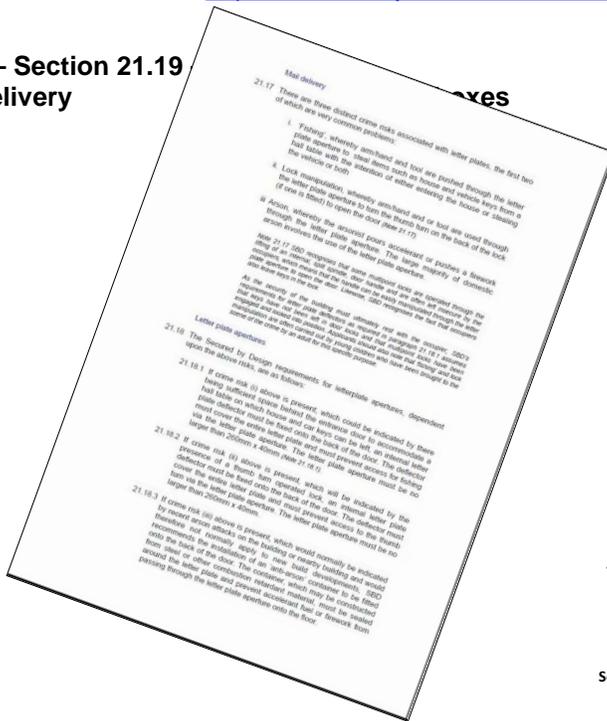

Euroboxessecure mailbox systems

For that extra peace of mind the lockable letterflap 'Flaplock™' has been created by Safety Letterbox Co following demand from Arson task force teams across the UK to retro-fit and block up existing letterflaps in doors of apartments or front doors, providing the option to lock or unlock as required. Fitted in seconds, this affordable solution is ideal to provide security to those living in fear of arson attacks, intimidation and other crimes. Flaplock can be used in conjunction with Eurobox – single mailboxes suitable for individual dwellings conforming to EN13724.
