

Epsom Race Course

Eurobond's Europanel Extra has been specified for the construction of the impressive new entrance pavilion at Epsom Downs Racecourse. The enhanced spanning capabilities afforded by Europanel stone wool core has helped to substantially reduce the secondary steel work within the building and significantly reduce construction time; an exceptionally critical factor when time scale is tight.

The exciting new £27.6 million redevelopment programme is now complete. The entrance pavilion is home to the racecourse administration, operations and management team.

Two hundred square metres of Eurobond's Europanel Extra, faced with Corus Prisma White, were specified for the pavilion. Europanel's market leading design flexibility was of real benefit to the architect and installation teams behind this construction.

Module widths available in 5mm increments between 300mm and 1200mm enabled feature bands to be installed in relatively small quantities, and perfect alignment when integrating the panel with glazing louvre components.

Europanel's ability to easily and effectively become integrated with glazing from partner companies helps to provide a 'total wall solution'.

The Extra level of fire performance afforded by this thicker than standard panel system enabled Epsom to maintain the highest levels of public safety, with excellent fire performance thanks to Europanel's non combustible stone wool core.
