

HELO CASE STUDY – ALEXANDER STREET: LONDON

CLIENT: Private Client
SITE: London, UK
PROJECT: Alexander Street

The Alexander Street project was a conversion of a former London pub into a prestigious new residence for a discerning client. The interior of the building was largely removed and rebuilt.

A small Health Suite was created in the basement of the building comprising a 1.8m round Spa, Designer sauna and traditional Hammam steam room – rendered in traditional Moroccan Tadelakt.

GENUINE SAUNA & STEAM

PROJECT: ALEXANDER STREET

A: The Hammam steam room

Built in Lux element with the external walls forming the curve around the spa. Essence laden steam with air assistance (Helo Wellness System) softly billows into the room via the steam plenum, topped with quartz pebbles. Extract air ducting is built into the bench and hidden in the wall make-up. The finish throughout is in a dark grey Tadelakt with special steel framed door. Atmospheric colour change lighting in the bench riser and above the steam outlet.

B: Designer sauna

Mirroring the shape of the steam room the sauna has a curved wall finished with black Granite pieces behind the Helo designer 'Ring' heater. The heater has a collar and is built into the lower level bench. The heavy industrial steel door is timber paneled within the sauna to match the sauna interior. Both steam and sauna controlled by the new digital touch panel.

C: Designer sauna

Detailed view of 'Ring' heater with large capacity of sauna rocks and curved granite wall.
