

# Total control of building security... from penthouse to parking garage.

Advanced Synchronized Locking (ASL) software can protect your entire facility from smoke and fire damage as well as from breaches of security or acts of terrorism when used in conjunction with Won-Door FireGuard and SteelCurtain.

Control fire, smoke and other toxic fumes in interior atrium designs.

Monitor the status of nonWon-Door products.

Doors can be programmed to report an obstruction or security breach.

Protect openings into a shaft enclosure in underground parking garages.

Provide executive protection without visible barriers.

Protect the entrance to a tenant suite opening into a fire rated corridor.

Elevator lobbies are a logical spot to control those entering and leaving the building.

Security personnel can monitor and operate every door logged into the system.
