

Siberian Larch

Cladding & Trim

SILVA 
TIMBER PRODUCTS

Why choose Siberian Larch?

Siberian Larch's durability, high density and longevity make it one of the most popular natural cladding solutions available.

Sourced from FSC® Certified forests, Silva Timber's Siberian Larch has a tight grain with small and well interspersed characteristics for a more consistent and appealing appearance compared to other Larch available in the UK. The high proportion of heartwood creates a highly durable material.

Natural resistance to decay

- Resins and extractives in Siberian Larch create a high resistance to decay and rot

Extreme growth conditions

- A slow growth tree for a tighter grain, increased durability, and high density making it difficult for decaying organisms to penetrate

Hardest softwood available

- Siberian Larch measures 1100 lb/in² on the Janka Scale, making it the hardest softwood species commercially available

Sustainably sourced

- Great care taken to ensure sustainable sourcing from FSC® Certified forests

Sawfelling I-IV Grade

Regulated by the GOST National Standards, the grade limits the size and quantity of knots and other natural characteristics.

Characteristics within this grade are small and well interspersed, providing a clean, consistent appearance.
